

## A Field Guide To Grassy Weeds

***“The best grassy weed guide that I have used”***

– Dr. Darren Robinson, Ridgetown College

### **Purpose:**

Grassy weeds are generally harder to identify in the field than broadleaf weeds especially at the growth stage when herbicide selection decisions are being made. Identification of grassy weeds at this stage are critical since many are highly selective when it comes to herbicide sensitivity. Correctly identifying grassy weed species is critical to designing an effective weed control program.

### **Results:**

This 28 page, full colour pocket guide (available in English and French) provides all the necessary information to correctly identify the most common grassy weeds found in Ontario field crops and includes:

- Yield
- Loss estimates of each grass species so that producers can determine their economic action level.
- Close-up photos to clearly identify various plant parts.
- Clue to help distinguish one grass species from a similar looking species.

### **Summary:**

This compact grassy weed guide will be sent out at no charge to growers when they call 1-888-283-6847.

### **Acknowledgements:**

Peter Smith for the amazing photography, AdFarm for design and layout of the guide and to Bayer Crop Science who printed this guide.
