

Eastern Ontario Crop Diagnostic Day 2009 – July 21st

The Eastern Ontario Crop Diagnostic Day is a co-operative effort between the Ontario Ministry of Agriculture, Food and Rural Affairs, the Eastern Ontario Crop Advisory Committee and the Kemptville Campus, University of Guelph. The Eastern Ontario Crop Diagnostic Day is an annual event held the 3rd Tuesday in July, designed specifically to improve the problem solving skills of seed, fertilizer and chemical industry personnel, agricultural consultants and farm managers. Certified Crop Advisor credits are available for most sessions.

The Eastern Ontario Crop Diagnostic Day provides growers and agri-business personnel with “hands-on” learning experiences to assist in the correct identification and treatment of crop problems common to eastern Ontario. The program provides a “real-world” environment where agriculturists can hone their crop trouble-shooting skills and evaluate new and alternative management strategies.

This year’s topics included:

- Weed Identification
- Weed ID, Diagnostic Challenge
- IP Soybeans Weed Control
- Roundup Ready Corn Weed Control
- Bio-energy Crops
- Insect Pests 2009
- Understanding Soybean Yields
- Forage Options
- Tires and Compaction
- Roundup Ready Soybeans into Sod
- Disease Management in Cereals

Over 300 participants attended the Eastern Ontario Crop Diagnostic Day in 2009.
